

RACK SUPPORTED BUILDING

Rack supported structure is comprised of storage systems that act as the structural support for the walls and ceiling of the facility while still providing storage. These can be installed inside, or in addition to, an existing warehouse or designed and built as an exterior structure.

Target customers: Warehousing and Logistics, Manufacturing, Automotive, Food and Beverage, Retail and E-commerce, Pharmaceutical and Healthcare, Aerospace and Defense, Chemical and Petrochemical, Energy.

Advantages:

- Space Optimization
- Cost Efficiency
- Customizable Design
- Faster Construction
- Improved Workflow

- Scalability
- Durability and Strength
- Integration with Automated Systems
- Better Inventory Management
- Energy Efficiency
