STRUCTURAL CANTILEVER

Cantilever racking is the perfect solution for the safe and organized storage of long goods and bulky parts, due to the lack of front uprights. The robust design of the cantilever racking provides reliable storage solutions for heavy applications, in warehouse, industrial, retail or external applications.

Cantilever racking enables users to minimize stock selection times and easily maintain stock levels by using the upper storage levels for stock, it also maintains the quality of the high value product by raising it off of the floor, keeping it clean and protecting it from damage.

We design and build cost-effective racks, to carry your specified loads and maximize the capacity of your space.
